Both competence and commitment

A client who is to choose among several technical support providers rarely makes its decision solely upon the services offered. Those companies who are awarded the contract most often display significant confidence, service-mindedness and work ethics to attract customers. These critical elements are the cornerstones of EC Konsult's mission. In every commission, we participate with the attitude that our customers should receive more than just technical service.

A unique little company

EC Konsult is perhaps smaller than many other technical service consultants are and most of our employees have been with us for long periods. Clients consider a continual relationship throughout the various projects to be of particularly high value - and even regard ongoing contact between projects to be important.

Our client relations are built on open and direct communication. Mutual confidence and long-term vision are foundational elements along with an effective working structure and organisation. We see little value in finding short cuts to success - for us it is all about maintaining satisfied customers.

Securing customer profits!

Applying our long-standing industry experience allows us to tailor-make flexible technical solutions that are designed to improve our clients' competitiveness and profitability. Our customers also benefit from service personnel with a balanced mix of ages, experience and gender for which EC Konsult is reliably known.

We have established a creative company environment of the highest calibre to assist our partners. This has led to the development of responsive structural solutions that have stood the test of time.

This formula has worked very well for us since our founding in 1985. Evidence that we have succeeded in our endeavours is confirmed through so many clients who repeatedly return with new challenges. Therefore, we can say with confidence and pride that our proven efforts are successful and profitable - for our clients as well!

Informational systems

Technical development specialists

EC Konsult specialises in assisting in technical development that applies our expertise in electronics and computer software. Consulting services we provide range from electronic design, communication, informational systems and including IT solutions to name just a few.

The commissions that we are entrusted with are variable and may involve everything from initial comprehensive involvement to more sectional response should our client require back-up competence and resource assistance. We also offer parallel product and systems development services to existing equipment and IT system needs - both internally on-site or at our offices upon request.

Long-standing experience

Electronics and software are united in the concept and function of embedded systems - which was indeed our original service area. We are happy to share our lengthy experience and combined knowledge with electronics design, hardware-oriented programming, power electronics, computer communication and real-time programming.

To achieve competitive advantages for our clients, we can develop, adjust and integrate effective solutions involving informational systems. Customer specific applications and systems are created, combined and maintained in such diverse areas as accounting calculation, time reporting, automatic code generation, project follow-up and expenditure analysis - elements in which conceptual platforms such as database, object-oriented systems development and distribution programming are utilised.

Satisfied customers

Our ambition is to participate as early as possible in the initial set up phase to advise the client about project leadership, preliminary analyses, required specifications, testing, research, documentation and eventual installation procedures. To maintain an open dialogue and informational channel to our client is also important, as this paves the way to successful project completions. Beyond our advanced technical capabilities, our ambition is to always have fully satisfied customers to achieve mutually rewarding cooperation.

Both small and imposing in technical systems administration

EC Konsult works comprehensively with both sectional and all-encompassing projects involving systems administration. We offer services whereby we provide the support for our clients with development, integration, maintenance and training of personnel.

Active administration

When advanced component systems, routines, organisations and people combine in a technological environment, it is crucial to have full control over all of the elements so that they function properly and that no single entity adversely degrades the entire system function.

To offer optimally effective technical and systems control, EC Konsult always makes use of the most modern innovative equipment and methodologies. To increase administrative effectiveness and insure that systems operate without interruption, we continually collect fundamental techniques that indicate any potential weaknesses in the system.

Comprehensive commitment

EC Konsult has extensive experience working closely with our clients in complex situations. This makes our all-inclusive response one of our strongest attributes concerning both developmental projects and system administration.

Our wide-ranging commitment to functional administration normally includes a broad variety of service options to include project formulation, integration, maintenance techniques, documentation, technical and systems control, support and educational training. Our consultants naturally combine the very highest competence in their respective fields, while also possessing all the required skills for up-to-date quality and safety certification.

An important link in our administrative capacities is our customer assistance desk, which provides advice and quick trouble-shooting response to our clients' own technicians and administrative staff in the case of a problem or inquiry. This experience gives us a solid foundation from which we constantly improve client relations.

EC Konsult is a wholly owned subsidiary within the EC-gruppen concern. Since 1985, we have taken full advantage of the synergistic opportunities presented in the IT sector. We have accomplished our success through an effective mix of services addressing the often complimentary needs of rapidly developing innovations with systems development, education and research. EC-gruppen has a dynamic ownership profile that is comprised of a Board of Directors, competent personnel, affiliated companies and special interest alliances.

Head offices are located in the city of Svängsta, in Blekinge county in Southeastern Sweden.

We also have regional offices in Kristianstad and Lund.
